Avalanche Danger

The southern Gallatin and southern Madison Ranges, including the Lionhead area near West Yellowstone, the mountains around Cooke City, and the Washburn Range:

A weak layer of faceted snow is buried 1 – 3 feet deep in the mountains around West Yellowstone and Cooke City. This layer is a concern on leeward slopes that are being loaded by winds. With 1 – 3 inches of new snow, and strong ridge top winds, these slopes will likely avalanche with the added weight of a skier or snowmobiler. Today, for the southern Madison and southern Gallatin Ranges, the Lionhead area near West Yellowstone, the mountains around Cooke City, and the Washburn Range, a **CONSIDERABLE** avalanche danger exists on wind-loaded slopes steeper than 35 degrees. Wind-loaded slopes that are less steep, and all non-wind-loaded slopes, have a **MODERATE** danger.
